Sep 2016 - Mar 2016

Business Intelligence / Data Analytics for Online Fashion Store (Degree - Industry Project)

An optimized web application that adheres to the manifold needs of customers for a fashion store company (provided with a customizable catalogue for wholesale as well as retail customer

Creation of application bridges the gap between wholesale customers in various regions around the world and the company's local office by providing web solutions for enabling customers to choose from latest catalogue without the need of periodic visits, to local showroom (B2B)

Extended the web solution by product recommendation using frequent Item set algorithm in R and integration with PHP-Java Bridge along with BI tools helps to generate meaningful reports and allowing an insightful view to the manager, thus helping in making informed decisions.
